

FLEX SERIES CULTURE PLATES

Elastomer-bottomed culture plates for culturing cells in a standard (Flex® I) Baseplate using the FX-2000™ Tension Plus System

Flex I® Culture Plates

- Flexible membranes in 6-well culture plate.
- Entire well membrane can be readily removed for morphologic or biochemical analyses.
- 6-well culture plate with total growth surface area of 29 cm² (4,83 cm²/well).
- Smaller 25 mm wells conserve medium and cells.
- Multiple cell samples can be taken from one well for replicate biochemical analyses.
- Covalently bonded surfaces: Amino, Collagen (Type I or IV), Elastin, ProNectin (RGD), Laminin (YIGSR).

Ordering Information	
<i>Catalog Number</i>	<i>Product/Item</i>
P-1001U	Flex I® Culture Plate – Untreated
P-1001A	Flex I® Culture Plate – Amino
P-1001C	Flex I® Culture Plate – Collagen Type I
P-1001C/IV	Flex I® Culture Plate – Collagen Type IV
P-1001E	Flex I® Culture Plate – Elastin
P-1001P	Flex I® Culture Plate – ProNectin
P-1001L	Flex I® Culture Plate – Laminin
