

Acrylic Laboratory Products

(detailed information and prices on request)

Animal Holders

IBI Animal Restraint products are designed to hold mice and rats, keeping both user and animal safe and secure. The holders are available in five different sizes.

Beta Shields

IBI Scientific Beta-Gard™ shields are manufactured using the highest quality materials to ensure safety and years of worry free service. All IBI radiation shields are constructed of 1/2" thick cast acrylic which provides the best protection against Beta radiation.

Glove Box or Paper Tissue Box Holders

IBI Glove or Paper Tissue Box Holders are designed to hold a standard glove box size or accommodate three different sizes of paper boxes. The holders can hang on the wall using double sticky tape or screws that come included with the holder, or can lay flat on the benchtop. Also available is a glove box holder with a lockable lid.

Microinjection Molds

IBI Microinjection molds are designed and manufactured to imprint on to an agarose slurry and form channels to firmly hold Zebra fish embryos in place during micro-injection. IBI has several types of molds for different applications and embryos.

Pipet Holders

IBI offers numerous pipet holding stands and racks to help organize the Life Science Research laboratory of today and to have tools readily and easily accessible during critical procedures.

Serological Pipet Racks

Each shelf of the high quality racks is individually manufactured to create the notched front for easy grabbing of shorter pipets. The IBI racks have an additional acrylic plate at the bottom to add stability and rigidity.

Staining Trays

IBI Immunohistochemistry Staining Trays are made from cast acrylic for years of dependable service. Precision machining ensures that each slide is held securely in place. The trays can be used at 37 °C. The black cast acrylic keeps your slides in a dark, humid environment for safe storage. IBI also manufactures staining trays with clear lids.

Storage Containers for Beta Emitting Samples

IBI Beta-Gard™ storage boxes are made of heavy duty 1/2" thick cast acrylic. They are designed to store and transport Beta emitting samples. Designed to hold most tube racks, small bottles and vials, the IBI storage containers provide a safe and easy way to transport Beta emitting samples securely.

Waste Containers

IBI Waste containers are designed and manufactured to provide years of worry free service. Made of heavy duty 1/2" thick cast acrylic, these containers are rugged and of superior manufacturing quality.
